Recruitment Team

Snowy Hydro Limited
Melbourne, VIC

Subject: Application for Cyber Security Analyst (Melbourne / Hybrid)

Dear Snowy Hydro Recruitment Team,

I am writing to express my strong interest in the Cyber Security Analyst position. As a Graduate of Cyber Security from Deakin University with full Australian working rights (subclass 485 visa, valid for 2 years), I am eager to bring my hands-on technical capabilities, DevSecOps pipeline experience, and a strong safety-first operational mindset to protect Snowy Hydro's critical energy infrastructure.

Snowy Hydro's unique combination of legacy assets, like the Snowy Mountains Scheme, and future-focused projects like Snowy 2.0 requires resilient security controls across both IT and Operational Technology (OT) environments. My academic training and practical lab environments have been built around this exact intersection of systems engineering, security automation, and incident analysis.

I bring hands-on experience in several key areas that align directly with Snowy Hydro's key responsibilities:

- **DevSecOps & Pipeline Integration:** I designed and engineered a declarative Jenkins CI/CD pipeline, integrating SonarQube (SAST) quality gates and automated secret auditing tools. This directly aligns with your need to embed vulnerability management and secure development principles into cloud deployment cycles.
- **Incident Detection & Forensic Analysis:** Through my lab projects, I have developed deep competency in network and system telemetry. I have conducted physical memory forensics using Volatility 3 to detect process hollowing in Windows environments, and parsed packet captures using tcpdump and tshark to isolate network anomalies—skills that translate directly into EDR alerts and SIEM event correlation.
- **OT Infrastructure Awareness:** My projects in Software-Defined Networking (SDN) using Mininet and ONOS focused on network vulnerability mapping and measuring throughput decay under flood attacks, giving me a solid foundation in the availability and performance priorities critical to OT networks.
- **Discretion and Safety-First Focus:** In my role as a Console Operator at BP Australia, I manage fuel console systems and monitor live CCTV feeds in a high-hazard retail environment. This experience has instilled in me a deep respect for strict regulatory compliance, emergency response protocols, and absolute discretion when handling sensitive operational data.

I am a self-motivated "doer" who loves diving into technical logs, resolving platform integration issues, and automating routine tasks using Python and Bash. I would welcome the opportunity to discuss how my technical skills and dedication to critical infrastructure safety can support the Snowy Hydro team.

Thank you for your time and consideration.

Sincerely,
